

# Software Architecture

**NodeJS** - Is the server side JavaScript execution environment.

**Express**- Lightweight framework that provides access to web API in Node.

**MySQL** - Open source relational database management system (RDBMS).

**Sequelize ORM** - NodeJS/MySQL interface for object relational mapping. Provides DB connection drivers, and models JavaScript CRUD (create, read , update, delete) operations.

**AngularJS** - Client-side JavaScript framework. Provides two-way data binding, and supports Model-View-Controller (MVC) Design Pattern. Lives in the client's web browser.
